

Case-Study - Plenum Cooling

PACKAGED REFRIGERATION SYSTEMS FOR COLD-ROOMS

FLEXIBLE and ENERGY EFFICIENT

Developed for cooling potatoes, the KOOLJET SMA Through the Door designs have unleashed significant flexibility and energy savings.

PORTABLE - Locate the cooling where it is needed. Easy to move around to other buildings and concrete pads. Simply connect the power and provide outstanding performance and reliability.

EFFICIENT - Dual-Kool technology using interleaved coils and VSD condenser fans provide the ability to operate refrigeration at the right energy levels to significantly reduce energy use.

COOL THE PILE - By installing the KOOLJET System directly in the correctly sized plenum, with controlled dampers for fresh air and variable-speed system fans, the entire pile can be effectively cooled using minimum energy.
